

# Sheet Dispenser PLR

Fully Automatic Sheet Dispenser

## Sheet Dispenser PLR

The Cyklop fully automatic sheet dispenser usually works in conjunction with a stretch wrapping machine such as the Cyklop GL 1000. It also works excellent as a stand alone machine. The PLR places a solid board/paper sheet/plastic sheet on top of the palletized goods or as pallet divider which is placed between layers of a product stacked on a pallet.

This equipment developed by Cyklop Teknik reduces damage caused by the weight of the goods and also makes a better protection of the products if pallets are stacked on each other. A solid board is more robust and steadier then using a conventional polythene top sheet.

## How does it work?

Suction cups lifts a sheet from the dispenser and applies it to the top of the palletized goods and once the goods have been stretch wrapped the top sheet is firmly wrapped in position.

## Options

- Extended mast
- Extended arm
- Equipment for mixed pallet formats
